LegalOS: review-day pitch and demo script

Login: ramesh@kulkarnitextiles.in / Kulkarni@2026. Files in docs/demo_kit. Everything below is pre-loaded and costs no AI quota to open; live questions cost 2 calls each, so keep to about 10.

The story (say this first, 60 seconds)

Ramesh Kulkarni runs a 40-person textile unit in Surat. This month three things landed on his desk: a new yarn supplier sent a contract, a lawyer sent a notice about a bounced cheque, and a new vendor sent an invoice. He has no lawyer on retainer; one costs 5,000 rupees an hour. 63 million Indian SMEs live like this. LegalOS is the operating system they can afford: five workspaces, one calendar, and one rule: every answer shows its evidence, a quote from the document, a section of the law, or the government registry's reply. When it does not know, it says so. Let me show you what it does with Ramesh's three papers.

The run (10 minutes)

Minute	Workspace	Open or type	Say	Show
0-3	Contracts	Round button top-right, then Yarn Supply Agreement (file 01)	The supplier's contract. Score 100, high risk. 13 clauses that hurt him.	Click Unlimited one-sided indemnity: the text jumps and highlights clause 6.1. Open Suggested change. Click Supplier can change prices at any time. Ask tab: Can the supplier raise prices without asking me?
3-4	Vendors	Type 27AAACT2727Q1ZW slowly, press Enter	That is the live GST registry: Tata Motors, Active. Then change the last digit to 8.	Cells turn green as you type; the wrong digit fails before Enter.
4-7	Notices	Round button, then Mehta and Associates (file 02)	15 days left, reply by 12 November, counted from section 138. Added to the calendar.	Type card (cheque bounce, act and section, who handles it). Steps 1 to 3; tick an action. Step 4: click a yellow blank. Nothing invented; a lawyer must review before it is final.
7-8	Compliance	The overdue GSTR-3B	Every filing for this company, built from its profile. 30 rules with sources.	Round button, Edit profile, switch GST composition scheme on: rows change. Switch back.
8-9	Documents	Click What is the notice period for managers?	Answers from his own handbook, quoted.	Click the citation chip: found word for word. Type: summarise the handbook.

Minute	Workspace	Open or type	Say	Show
9-10	Close		Every answer carried its evidence. When it does not know, it says so. That is the difference between a chatbot and a tool a business can rely on.	Numbers: 604 tests; top result correct for 32 of 33 retrieval questions; 24 contract rules and 30 compliance rules with sources; live GST registry.

If a judge hands you a file

- Contracts and Notices accept PDF, Word, text and photos. Upload it and narrate the stages: reading, finding clauses, checking Indian law, scoring. 30 to 90 seconds, 2 to 3 AI calls.
- If the screen says the AI is rate-limited, say so plainly, open a pre-loaded file and continue. Nothing fake ever appears.
- Documents: scope the question to a collection for the cleanest answer. Off-topic or absent questions get an honest not in your documents.

Say the limits yourself

- Decision support, not legal advice; every legal note shows its source; some are marked being verified.
- A fine-tuned Indian legal model is future work; Professional Tax beyond Karnataka and MCA lookups are not done.
- The free AI tier limits daily calls; the product rotates keys and models and tells you when it is out.

Likely questions (short answers; the full versions are in the technical explainer)

Q. How do you stop hallucination?

A. Structured output, mandatory verbatim quotes verified against the file, deterministic rules for the law; unverified items are flagged and excluded.

Q. Why not ChatGPT?

A. No registry, no calendar, no quote verification, no audit trail. Our value is verification and workflow.

Q. Accuracy?

A. Retrieval 32 of 33 top-1 on a labelled set; verified-citation rate shown live; 604 automated tests.

Q. Business model?

A. Per-company subscription; CA firms as the channel (one CA serves 50 to 200 SMEs).

Q. Data privacy?

A. Local database per organisation; only the analysed document goes to the AI provider; uploads validated and de-duplicated.
